EDUCATION

Uppsala University Aug. 2023 – Jun. 2028 (expected)
Master of Science in Industrial Engineering and Management Uppsala, Sweden

- Specialization: Industrial Analytics.
- Bachelor of Science in Engineering (Teknologie kandidatexamen), 2026.
- GPA: 4.7/5.
- Scholarship: Hitachi Energy Power Up Program, 2026–2028. Two-year program for master's students at KTH and Uppsala University, with factory and site visits, cross-functional problem-solving projects, and career development in Ludvika and Västerås.

EXPERIENCE

Lundströms Logiska Apr. 2026 – Present
Co-Founder Uppsala, Sweden

- Co-founded a consultancy in AI strategy, systems development, and management consulting; responsible for client relations, project scoping, and delivery.
- Delivered Milknet.se, the website for a national Swedish network of 30+ neonatal milk banks, guiding prospective donors to their local milk bank and giving healthcare staff access to shared guidelines (Astro, Swedish-language, accessibility-focused).
- Built the company website with bilingual (SV/EN) routing and a case-study showcase linking to live deployed projects (Astro).

I-Sektionen Uppsala Jul. 2025 – Jun. 2026
Vice Chairman and Treasurer Uppsala, Sweden

- Managed finances for a student association with ~1.5 MSEK in annual revenue, covering invoicing, bookkeeping, cash flow analysis, and financial reporting to the board and members.
- Oversaw ~40 kSEK in capital investments (camera equipment and merchandise) and served as the association's contact with companies, financial institutions, and government agencies.
- Facilitated a major reorganization: replaced the board with a smaller strategic board plus an operative group running day-to-day operations, created new roles, and split overloaded responsibilities across multiple roles.

Uppsala University Nov. 2025 – Jan. 2026
Teaching Assistant, "Virtual Development of Automated Production Systems" Uppsala, Sweden

- Supervised lab sessions and project work in a course focused on PLC programming (Ladder Logic) and production simulation in Simumatik.
- Led students through lab assignments, assisted with project development, and explained key concepts in industrial automation and control systems.

Tempo Runmarö AB Summers 2024 – 2026
Store Worker Runmarö, Stockholm

- Purchasing manager for fruits and vegetables; built an Excel demand-forecasting model from previous years' sales data and presented sales statistics in Power BI.
- Trained new staff and regularly held overall responsibility in teams of ~5.

PROJECTS

Personal LLM [\(GitHub\)](#).

- Built a GPT-style decoder-only Transformer from scratch in PyTorch, implementing core LLM components including tokenization, positional encoding, multi-head attention, layer normalization, and probabilistic sampling methods.
- Extended the project by fine-tuning `Phi-3-mini-4k-instruct` on 2,000 Python coding-instruction examples using QLoRA on a Google Colab T4 GPU, then deployed the resulting coding assistant to Ollama.

Clavis [\(Live-App\)](#).

- Built an AI synthesis platform using a Model Council architecture that queries multiple LLMs in parallel and delivers a single synthesized response.
- Developed with Next.js 14, TypeScript, Zustand for state management, and Appwrite as the backend-as-a-service layer.

RecipeJar [\(GitHub\)](#) | [Live-App](#)

- Built and published an Android recipe app on Google Play for saving and managing recipes clipped from the web.
- Integrated OCR for cookbook digitization, a Supabase backend, and Android packaging via Capacitor.
- Built with Astro, React, TypeScript, and a multi-language interface with automated unit conversion.

Congressional Trade Tracker [\(GitHub\)](#).

- Developed a Python-based automated system to fetch and track congressional stock trades using a Model Context Protocol (MCP) server.
- Built a data pipeline integrating `yfinance` for real-time market data and SQLite with Peewee ORM for persistent storage.
- Designed an interactive web dashboard using Dash (Plotly) and Bootstrap to visualize historical trade trends and market analysis.

SwarmKit [\(GitHub\)](#).

- Developed SwarmKit, a modular framework for building and deploying multi-agent AI systems.
- Implemented communication protocols and task orchestration logic to enable collaboration between autonomous agents.

SKILLS

Languages : Python, Java, C#, C++, SQL, TypeScript

Web : React, Next.js, Astro, Vite, Tailwind CSS, Supabase, Dash, Bootstrap

Technical : Automation & PLC, Docker, Linux, Git, SQLite, Excel, Power BI

AI : LLM Deployment, Model Quantization, AI Strategy

Finance : Accounting, Bookkeeping, Cash Flow Analysis
